

PredictAssist Manual and Software Description

PredictAssist has two basic functions; one is to record your predictions for each game of the season, and the other is to help you make your predictions by providing both historical performance data and a copyrighted algorithm that uses performance data to generate a prediction for you. This is not intended as gambling software and the author makes no guarantees regarding the predictions made by the “PC” feature of this software. It is strongly recommended that the user read the license agreement in the appendix of this manual prior to use.

PredictAssist Features:

- track picks for up to 100 users
- download team scores
- download season schedule
- edit team names or their division membership
- edit user names, passwords, and status
- show team season performance data and schedule
- display season schedule and pick data by team, week, or in its entirety
- display user pick statistics and past year results
- set your own display color scheme based on any team’s colors
- generate game predictions algorithmically with point spread
- export user and season statistics to CSV files
- backup user pick data to separate files
